The End Of Poverty

We are
ARBITRAGEURS!
We engage in
Cryptocurrency Arbitrage.

www.arbitrage.com

- Arbitrage is the practice of taking advantage of a price difference between two or more markets: striking a combination of matching deals that capitalize upon the imbalance, the profit being the difference between the market prices.
- Arbitrage Trading has potential in making **HEFTY SUMS.**
- Cryptocurrency arbitrage is made possible by a definitive differential in trading volumes between two or more markets. Unlike the stock market, the cryptocurrency isn't centralized, therefore the difference in prices will significantly vary from one exchange to another. In the 1970's, when the first computer made the trading process almost instantaneous, many traders realized they could easily pick up a commodity in a market where the prices were lower & simultaneously executing an order to sell in a different market where the commodity was much more expensive. Because of the growing demand for the quantitative systems made to spot aberrations in the bond and stock, as well as foreign exchange markets. There are not too many of these types of opportunities can be easily spotted, at least not ones a retail trader can reasonably profit from. For the exception of Digital Currencies.
